Request for Consideration as a Dormant Radiation Program

I request approval for Radiation Program _____ to be considered a dormant radiation program. I agree to provide a copy of the non-use certification to Radiation Safety each month of the program's dormancy and to maintain copies of these certificates to replace monthly contamination surveys on file in my lab. I understand that failure to do so may result in closure of the radiation program. All regular program requirements except monthly surveys must still be met, including training, dosimetry, program renewals and audits.

Principal Investigator Signature

Date

Radiation Safety staff will conduct an inspection of the candidate laboratory to verify removal of all radioactive materials and waste containers before approval.

A radiation program is not considered dormant until a confirmatory approval memo from Radiation Safety is received.
