

ATRF Laboratory Traffic In the First Floor Atrium

In an effort to minimize “hazardous” traffic in the first floor atrium please:

- Use the lab wing elevators to reach other lab floors in your wing.
- Use the lab wing elevators to access second and third floor atriums when going to second and third floor labs in different wings.
- When transporting hazardous materials (ANY biological, chemical or radioactive material) between lab wings, or floors within the same wing, place the primary container in a suitable sealed, leak proof secondary container. A plastic tub or tray with a tight fitting lid works well. Clearly mark all containers as to contents. Please do not wear lab coats or gloves outside of lab wings or in elevators!
- Do not transport dirty glassware or autoclave waste through the first floor atrium during working hours of 8am to 5pm.
- Shipping/receiving deliveries to second and third floor labs will be done using the B wing elevator to access the second and third floor atriums whenever possible.
- Shipments (properly packaged) being taken to B wing, general access to B wing repositories, EHS, etc. will be done via the first floor atrium entrance to B wing.
- For Hazardous Waste pickup please submit a pickup request:
 - For Chemical Waste email ncichemwaste@mail.nih.gov or x5718
 - For Radioactive Waste email nciradwaste@mail.nih.gov or x1384
 - MONDAY is waste pickup day at the ATRF
