

OVERHEAD LOADS TAKE CONTROL

NCI at Frederick/FNLCR Construction

OVERHEAD/DROP HAZARDS exist in demolition and construction
Workers can be **STRUCK BY, CRUSHED**, or even **KILLED** by overhead loads

Prevent accidents and injuries:

- Work with a partner
- Use mechanical support
- Work with manageable size pieces
- Barricade the work area
- Inspect tools and work platforms

DO NOT DROP LOADS!

AVOID DROP HAZARDS!
