</table>

**Special Precautions**

Isoflurane is volatile and may be absorbed through the skin. HEPA filters will not prevent exposure. **Contact EHS at 301-846-1451 for exposure monitoring.**

**Personal Protective Equipment**

Gloves (Latex or Nitrile)
Skin Protection (Suit or Scrubs or Lab Coat)
Eye Protection (Safety-glasses or Goggles)
Closed-toe shoes
Respirator with Organic Vapor + P100 cartridges (3M #60926) if engineering controls are not available. Supplied air or SCBA systems should be used in the event of chemical spills.

**Engineering Controls**

Isoflurane may not be used in a system which recirculates air.
Isoflurane must be used in a 100% exhausted CFH or Class II, B2 BSC. (3, 4)
See NCI-Frederick Safetygram ISM-211 for additional details. (5)

**Animal Handling**

No special precautions.

**Bedding Disposal**

No special precautions.

**Work Practices**

Follow LASP SOPs 3.047 and 5.025 as appropriate.

Reviewed 03/02/2015 These recommendations are not final and may be updated.
Isoflurane is a halogenated ether used as an inhalation anesthetic. It readily evaporates at room temperature and has a pungent odor. Exposure above the occupational exposure limit has occurred if the odor can be detected.

Isoflurane is capable of causing prolonged anesthesia and unconsciousness at low levels or death at higher levels. The use of Isoflurane without appropriate ventilation may impair consciousness and motor skills. There is some indication that occupational exposure to waste anesthetic gases may reduce fertility or harm developing children. The LASP SOPs for the use of Isoflurane should be observed carefully.
