

Environmental Policy National Cancer Institute at Frederick

The National Cancer Institute at Frederick (NCI-Frederick), part of the National Institutes of Health (NIH), conducts direct research aimed at identifying the causes of cancer, AIDS, and related diseases. NCI-Frederick scientists investigate the genetic, molecular, environmental, and behavioral factors that contribute to human cancers, and identify new targets for cancer diagnosis, treatment, and prevention. In support of this mission, the NCI-Frederick is committed to the protection of the environment and to the responsible use of natural resources. As proactive stewards of the environment and public health, NCI-Frederick embraces pollution prevention and sustainable development while continually seeking to reduce resource consumption.

Specifically, NCI-Frederick is committed to:

- Complying with all Federal, state, and local environmental laws and regulations, as well as Executive Orders and other applicable environmental requirements.
- Preventing pollution by minimizing the generation of wastes where possible, reducing and recycling materials, and, where necessary, disposing of wastes in an environmentally responsible manner.
- Integrating environmental and health considerations into decision-making processes through the implementation of the NCI-Frederick Environmental Management System (EMS).
- Continual improvement of the EMS to better our environmental performance by setting environmental goals, measuring progress, taking corrective action when necessary, and communicating results to NCI-Frederick management and staff.

All NCI-Frederick employees and contractors are responsible for being aware of the environmental and health impacts of their jobs and for continually striving to minimize these impacts as set forth in this policy. NCI-Frederick management will review this policy annually and update it as necessary.
